Chavdar Georgiev

Senior DevOps / Platform Engineer

GitHub Enterprise | Terraform | Kubernetes | GitOps | Vault | CI/CD | Linux | Infrastructure Automation

Profile

Senior DevOps and Cloud Platform Engineer with 25+ years of professional IT experience, combining a strong Linux and infrastructure engineering background with enterprise DevOps, platform automation and cloud-native technologies.

Experienced in designing and implementing automated infrastructure and delivery workflows using GitHub Enterprise, Terraform, Vault, Concourse, Kubernetes, Flux, Crossplane, Bash and Python.

Strong hands-on background in Infrastructure as Code, CI/CD, Git-based workflows, secrets management, Linux engineering and production operations. Recent work focuses on declarative platform engineering, GitOps and API-driven infrastructure provisioning across enterprise cloud environments.

Experienced in building reusable Terraform components, secure credential flows, automated provisioning and lifecycle-management workflows, and integrating GitHub Enterprise with infrastructure and CI/CD platforms.

Combines hands-on engineering with platform architecture, technical leadership, troubleshooting and stakeholder coordination across distributed enterprise teams.

Employment History

Senior DevOps Cloud Consultant - BST (NDBS), Sofia

February 2022 - Present

Senior engineering role focused on cloud platform automation, infrastructure lifecycle management, CI/CD and enterprise DevOps.

Cloud-Native Platform Engineering & GitOps - 2025-Present

- Engineering infrastructure through Kubernetes custom resources and GitOps workflows.
- Working with Kubernetes, Flux, Crossplane and related cloud-native tooling for declarative resource provisioning and lifecycle management.
- Investigating and implementing Git-driven desired-state infrastructure workflows.
- Working with provider-based and API-driven automation for platform resource management.
- Troubleshooting resource reconciliation, dependencies and provisioning flows across Kubernetes and cloud platforms.
- Contributing to platform architecture and engineering discussions around reusable infrastructure abstractions and automated service delivery.
- Working with SAP BTP resources including subaccounts, Cloud Foundry environments, entitlements, Service Manager and platform services.

Enterprise API & Workflow Automation - 2025-2026

- Automated technical-user provisioning while preserving required human approval steps.
- Implemented OAuth2 authentication and REST API integrations.
- Automated retrieval and validation of provisioning templates and external domains.
- Implemented draft creation, owner assignment and submission-for-approval workflows.
- Built reusable automation functions and structured logging for operational troubleshooting.
- Worked with authentication, validation and enterprise approval workflows.

Enterprise Platform & CI/CD Automation - 2022-2025

- Led design and implementation of an end-to-end automation framework integrating GitHub Enterprise, Terraform, Vault and Concourse pipelines.
- Developed reusable Terraform modules for infrastructure provisioning and lifecycle management.
- Created reusable Terraform components for GitHub service-user provisioning, PAT management and cloud platform automation.
- Integrated GitHub Enterprise, Terraform, Vault and Concourse into automated platform workflows.
- Established secure credential flows between Vault, GitHub and CI/CD automation.
- Worked with GitHub Actions runners as part of secure infrastructure automation workflows.
- Automated daily landscape creation, verification and cleanup across multiple engineering environments.
- Designed automated cleanup and verification pipelines.
- Established CI/CD integration patterns for enterprise infrastructure workflows.
- Improved pipeline reliability and reduced manual engineering onboarding effort.
- Reduced manual onboarding time by approximately 70% through infrastructure and workflow automation.
- Designed and maintained CI/CD workflows for repeatable infrastructure and platform delivery.
- Worked with SAP BTP Cloud Foundry environments and platform services.
- Supported application and service deployment workflows, including AppRouter and multi-target application environments.
- Worked with SAP Integration Suite / Cloud Integration and API-based integration scenarios.
- Collaborated with distributed cloud and engineering teams on platform architecture, infrastructure automation and operational requirements.

TOCC Cloud Integration - 2022

- Investigated cross-cloud architecture and management automation.
- Contributed to integration and lifecycle-management approaches for distributed cloud landscapes.
- Worked across infrastructure, platform and application teams to identify automation opportunities and operational dependencies.

Enterprise Cloud Infrastructure Support - 2022

- Linux systems engineering and troubleshooting.
- Infrastructure automation using Terraform, Ansible, Chef, Bash, Python and Perl.
- System software and environment lifecycle management.
- Monitoring and virtualization support.
- Incident investigation and operational problem solving.

Server Operations Team Lead - Experian, Nottingham / Remote

January 2021 - March 2022

Technical and operational leadership within a large multinational enterprise environment.

- Led distributed infrastructure operations and engineering activities.
- Coordinated incident resolution, service reliability and operational priorities.
- Worked across technical teams, management and business stakeholders.
- Supported cost optimization, technical decision-making and people development.
- Maintained hands-on involvement in complex infrastructure and production issues.

Lead Systems Engineer - Experian, Sofia

January 2019 - March 2021

Senior Linux and reliability engineering across large-scale enterprise infrastructure.

- Provided L3/L4 engineering support across large Linux estates.
- Designed proactive fixes and automation to improve platform reliability.
- Improved configuration management, patching and operational processes.
- Reduced critical production incidents through systematic engineering and root-cause elimination.
- Worked as a technical bridge between UK management, Bulgarian infrastructure teams and product teams.
- Worked with Bash, Git, BMC BladeLogic and enterprise automation.

Senior Linux Systems Engineer - Experian, Sofia

February 2017 - December 2018

- Linux infrastructure engineering and enterprise production support.
- Automation and configuration management using BMC BladeLogic and Bash.
- Incident, change and problem management in large-scale environments.
- Reliability improvements and operational automation.

DevOps Engineer - Reward Gateway UK, Sofia

January 2016 - February 2017

- DevOps automation for development and infrastructure environments.
- AWS-based development infrastructure.
- Vagrant and Puppet automation.
- Bash scripting and configuration management.
- JSON/YAML-based infrastructure and application configuration.
- Collaboration with UK-based development and operations teams.

Linux / UNIX System Administrator - HPE, Sofia

January 2014 - January 2016

- Linux/UNIX systems administration and troubleshooting.
- Enterprise incident and change management.
- Configuration control and infrastructure maintenance.
- ITIL-based production operations.

Software Development, Linux, Networking & IT Management

September 1997 - December 2013

Multiple engineering, consulting and management roles covering software development, Linux/UNIX systems, networking and Internet infrastructure.

- Linux server architecture, administration and troubleshooting.
- Network engineering with MikroTik and Cisco technologies.
- Routing, VPN, QoS and firewall infrastructure.
- Bash/shell scripting and software development.
- PHP and C/C++ development.
- Web infrastructure and application hosting.
- Technical support and service delivery.
- Infrastructure architecture and IT management.
- Customer-facing technical consulting and troubleshooting.

Core Expertise

DevOps & CI/CD: GitHub Enterprise • GitHub Actions • Concourse • Git • CI/CD architecture and automation • Reusable infrastructure workflows • Bash / Shell scripting • Python

Platform Engineering & Infrastructure as Code: Terraform • Kubernetes • Helm • Crossplane • Flux / GitOps • Infrastructure lifecycle automation • Declarative infrastructure • Linux / UNIX

Security & Secrets Management: HashiCorp Vault • Secure credential workflows • Service-user and PAT lifecycle automation • OAuth2 • Enterprise authentication workflows

Cloud & Platform Technologies: SAP Business Technology Platform (BTP) • SAP BTP Cloud Foundry • AWS • Microsoft Azure fundamentals • REST APIs • JSON / YAML • Cloud integration • Enterprise platform troubleshooting

Infrastructure Automation & Operations: Ansible • Chef • Puppet • BMC BladeLogic • Vagrant • Monitoring • Virtualization • Incident & Problem Management • Root Cause Analysis

Engineering & Leadership: Platform Architecture • Site Reliability Engineering • Technical Leadership • L3/L4 Production Support • Infrastructure Standardization • Stakeholder Management • Distributed Team Collaboration • Enterprise Operations

Certifications

Microsoft Certified: Azure Fundamentals (AZ-900)
Microsoft - May 2023
Credential ID: f7747ae7-1bde-4861-8310-f7018e309c33
Verify credential: https://www.credly.com/earner/earned/badge/f7747ae7-1bde-4861-8310-f7018e309c33

Education

Ph.D. level education with right to defense
University of Veliko Tarnovo "St. Cyril and St. Methodius"

Master of Science - Applied Mathematics and Informatics
University of Veliko Tarnovo "St. Cyril and St. Methodius"
Graduated with High Honors

Languages

Bulgarian - Native | English - Professional working proficiency | Russian - Working proficiency
